

CAPABILITY STATEMENT

WWW.CARPARKBARRIERSYSTEMS.COM.AU

COMPANY OVERVIEW

Our company commenced in business in 2009 focusing more on the compliance aspect of crashrails in particular. With extensive experience using spring steel legs, we decided there had to be a radical change to the appearance & function of carpark safety. With over 60 years experience in both Engineering and Construction we are able to cater for the rigorous demands of modern commercial building works.

We needed a proprietary product that looked a lot better, had a much smaller footprint and was competitive in price! Future-Guard was designed, developed, and crash tested and has been incorporated into many fine projects already. We supply and install all types of crashrails, wheelstops, balustrade, bollards and all of the metalwork packages associated with carparks.

“Futurefix” is now available which is the new system of “cast-in” fixings exclusively from CBS. We can therefore avoid any clash with PT Ducts or steelwork, and pre cut all materials to reduce our installation time on site.

PRODUCTS

FUTUREGUARD: THE AESTHETIC SOLUTION FOR YOUR CARPARK SAFETY:

FutureGuard is a fully tested and competitively priced vehicle barrier system that looks too good to sit on the side of the road! A proprietary system, designed, developed and tested here in Australia, this revolutionary new vehicle barrier system is specific to carpark barrier & industrial safety. The system addresses the long standing architectural issue of using traditional roadside guardrail in carpark applications.

MESHGUARD: REDUCE THE RISK OF SERIOUS INJURY AND DAMAGE TO YOUR PROPERTY:

MeshGuard is a competitively priced hybrid system incorporating spring steel legs that has been specifically designed as a carpark barrier system to bring greater protection to you and your customers. It caters for non-reinforced parapet walls or upstands where handrails are not required. MeshGuard is both economical and rapidly installed, so it is often used in carpark upgrades and refurbishments, in particular on carpark entry and exit ramps.

INDUSTRIAL SYSTEMS:

We also install industrial metalwork packages using fixed posts with W-beam as well as Flex 240 at the end of drive-ways. It includes the supply and install of bollards, wheelstops, handrails, downpipe protectors and any similar requirements. We offer a bespoke service to manufacture curved rails, and specific engineering to suit your project. All materials can be powder-coated to suit the surroundings. Our installation service is fully insured and we offer certification for all projects.

PROJECTS

- » Sydney University Shepherd St MSCP Refurb
- » Canterbury Leagues Club MSCP
- » Lake Macquarie Fair Shopping Centre
- » Narellan Town Centre Shopping Centre
- » Nepean Hospital MSCP
- » John Hunter Hospital MSCP
- » Cranebrook Shopping Centre
